

Using virtual reality to get ready for a health visit

[Watch video](https://www.youtube.com/watch?v=afh3SCgxDu8)(<https://www.youtube.com/watch?v=afh3SCgxDu8>)

This video is about a research project led by Dr Stefan Michalski. The project uses virtual reality (VR). VR is a headset that lets you see and hear a pretend health visit.

The video shows what you will see in the headset. It lets you practise a health visit in a safe place. This can help you feel calm and ready.

This video can help you:

- know what a health visit is like
- feel less worried
- feel more confident.
